

■ ALFA 200

HANDBOOK

The ALFA 200 is a four-leg steel frame desk system intended for general office environments as well as call centres, meeting rooms and training rooms etc. It is favoured thanks to its universal application and high rigidity.

Base

The steel-frame base comprises two side pieces (welded leg has cross section 50 x 50 mm and bent profile 30 x 40 mm) and two linking profiles. The legs can be adjusted for levelling (15 mm range) on uneven floors. The basic desk height is 735 (18 mm top) or 742 mm (25 mm top). On request a height adjustable frame is available (adjustable between 740 and 880 mm). Metal parts are finished with a high quality epoxy-polyester powder coating that ensures a high resistance to the wear and tear common in an office environment.

Colours – standard colours RAL TECHO a.s. (RAL9004, RAL9007, RAL9010, RAL9022).

Desktops

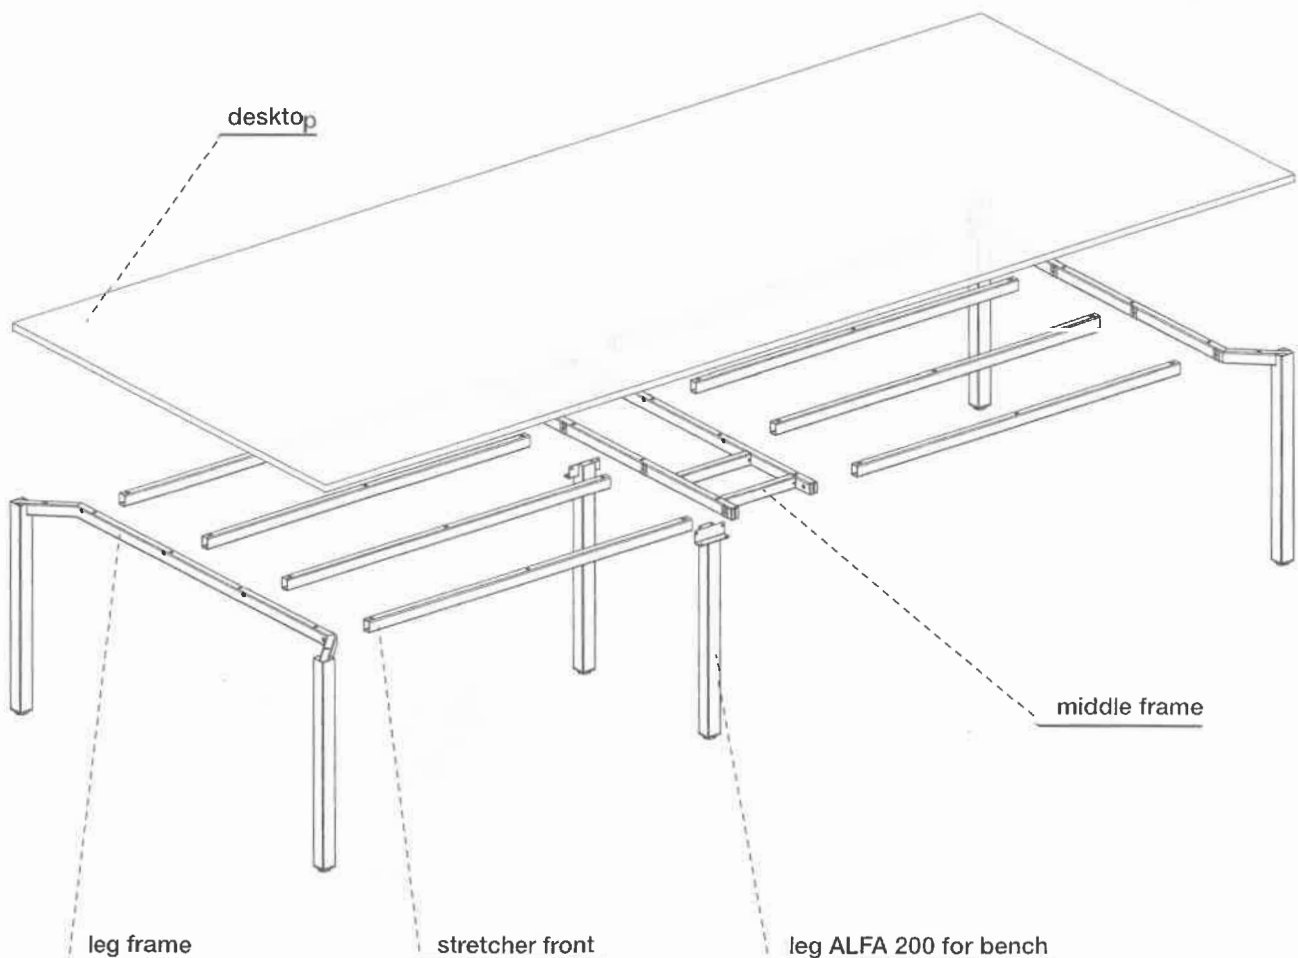

Desktops are made from a wood-based material from certified suppliers (18 or 25 mm MFC with 2 mm ABS edges in the same décor as the work surface – for selected decors the edges are attached using laser technology).

Desktop decors – standard decors TECHO, a.s. (grey, beech, wild pear, white).

Accessories

A range of accessories are available for the ALFA 200 desk system (screens, vertical and horizontal cable channels, PC holder etc.).

The handbook contains just basic information – because of the extensive variability of the frame just selected configurations are shown (RAL9010) along with standard frame components.
